**The Human Development Index (HDI)** measures average achievement in key dimensions of human development. It is based on life expectancy at birth, average duration of education and GDP per capita. It ranges from 0 to 100. 'High human development countries' (UN) are in the range between 70 and 80. Values are for 2021.

**The Corruption Perception Index** measures perceived levels of public sector corruption worldwide. Scores range from 0 (highly corrupt) to 100 (very clean). EU Member States with the highest and lowest values are labelled for comparison. Values are for 2021.

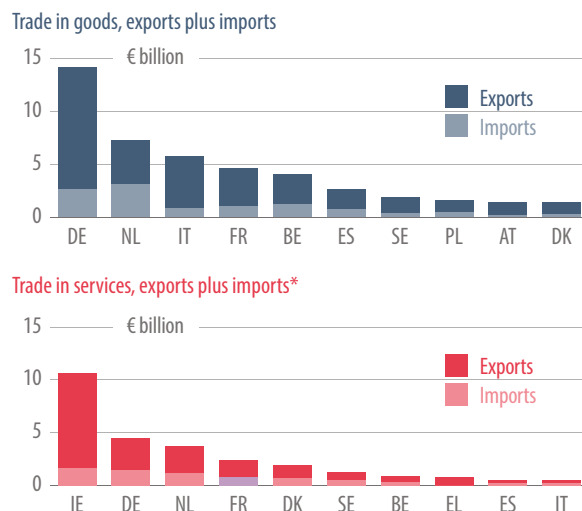

**The GINI index** measures deviation from a perfectly equal distribution in the distribution of income among individuals or households within a country. It is a measure of inequality in income distribution. A value of 0 represents absolute equality, a value of 100 absolute inequality. Data values are for 2019. There are no data for New Zealand.
